

e-Fuel Mobile

e-Fuel Mobile automates shift processing and delivery transactions for propane fuel deliveries. A native part of e-Fuel Delivery Management so no additional software, system integration or maintenance is required. Free download for Pro and Enterprise customers. Quick low cost setup with off the shelf hardware; designed for *Windows* compatible tablets, laptops and all in one touchscreens for clearer screens and easier application navigation. Mobile packages available in The Fuel Web store include tablets fully configured for e-Fuel Mobile. Flexible register and printing options. Built in Bing mapping and routing with GPS tracking.

Automates all standard processes to remove the possibility of manual data entry error. Integrates with Liquid Controls®. Automatically captures delivery gallons, controls pump operation and records meter counts. Support for custom ticket footers with three customizable lines. Streamline posting, print reports, record loading of fuel from storage tank and download an ordered list of scheduled deliveries using routing provided by e-Fuel. Process open service items on site, capture signatures, and use event logs and pause events to record time not spent on delivery. Easily transfer information to your accounting program.

Take e-Fuel Delivery Management on the road and stay in sync with operations. Geo coding gives you the most accurate delivery address possible. When Internet service is available, push new orders out and get updated completed deliveries and see truck location on delivery set maps. Detailed reporting for tracking operations and driver efficiency. Customer service cases can be viewed and responded to while the driver is with the customer. Get quick access to customer and delivery status anywhere, anytime. Great for night and weekend shifts.
